

National College Health Assessment Data for UGA

The National College Health Assessment (NCHA) is a national research effort organized by American College Health Association to collect data about the health of college students. The NCHA contains approximately 300 questions that assess health status & health problems, risk & protective behaviors, access to health information, impediments to academic performance, & perceived norms across a variety of content areas including: injury prevention, personal safety and violence; alcohol, tobacco, & other drug use; sexual health; weight, nutrition, & exercise; & mental health.

UGA has participated in this survey in 2001, 2003, and 2005. Through a random sampling process, UGA students were contacted & asked to participate in the survey on the web. In 2001, 525 undergraduate UGA students were surveyed. In 2003, 326 undergraduate students & 112 graduate and professional students were surveyed. In 2005, 530 undergraduate students & 154 graduate students were surveyed. The following summary is provided for informational purposes to the UGA community. If you have questions about the information, please contact the Health Promotion Department at 706-542-8690.

Reported use versus perceived use: The following tables show reported use for all students within the past 30 days compared with how often students perceived the typical UGA student on campus used substances within the same time period. Please note that the question did not specify typical behavior of an undergraduate or graduate student, just the typical student. Students who reported "Never" or "not using the substance in the last 30 days" are included in the never category.
